SUPERMICRO
SERVER TECHNOLOGIES

>>>>>>>>>>>>

Supermicro is one of the global leaders in the server technology market. It provides powerful server systems that allow the use of freely available server components (so-called vendor unlocked) and exceptional scalability while maintaining attractive prices compared to the majority of competitors. The customer gets a solution that optimizes operating costs with the possibility of further scaling over time.

ANAFRA is the only official system integrator and supplier of Supermicro servers, including extended NBD (Next Business Day) warranties. Configures, builds and burns customers' complete portfolio of Supermicro servers on Intel and AMD platforms. By combining not only an individual approach and exceptional pre-sales or after-sales support to customers, we deliver thousands of servers a year.

Supermicro server advantages

- Unique range of server portfolio with de-factually infinite configuration variability
- Exceptional value for money, performance, scalability
- Vendor unlocked technology
- Flexibility and speed to launch new Intel and AMD platforms
- We deliver the majority of Supermicro servers to customers within 10 days

- Supermicro has long been one of the 5 largest server manufacturers in the world
- American server manufacturer Supermicro has been operating in the server technology market since 1993
- Server management is automatically part of the motherboard
- Very high processing quality, strict input / output component checks, very low failure rate
- We provide extended NBD warranties for Supermicro servers

*ANAFRA je **jediným oficiálním** systémovým integrátorem a dodavatelem serverů Supermicro*

> Server hardware

Since 2006, we have been supplying customers not only with thousands of servers per year, but also with a very extensive portfolio of enterprise hardware. In addition to complete servers, we also help our customers with the delivery of often very specific additional components, not only in the Czech Republic, but all over the world. We either install network cards, controllers, graphics cards or NVMe disks directly in the servers we assemble, or we often also supply them as separate components. We always approach individual demands individually. We focus on the delivery of goods on favorable terms in the shortest possible time.

We cooperate mainly with the following suppliers:

- Barebone (Supermicro, ASUS, ASRock, Gigabyte, Tyan)
- Chassis (Supermicro)
- Motherboards (Supermicro, ASUS, ASRock, Gigabyte, Tyan)
- CPUs (Intel, AMD)
- Memory modules (Hynix, Samsung, Micron, Crucial, HP, DELL, Fujitsu, IBM/Lenovo)
- HDD (WD/HGST, Seagate, Toshiba)

- SSD (Intel, Seagate, Samsung, Kioxia/Toshiba, Micron, WDC/HGST)
- NVMe SSD (Intel, Samsung, Toshiba)
- Networking (Supermicro, Qlogic, Emulex, Myricon, Mellanox, Solarflare)
- RAID/HBA controllers (Supermicro, Broadcom/LSI, Adaptec, Areca)
- GPUs (NVIDIA, AMD)
