

## Connecting to the World - the success of your business

- ❖ To stay competitive, businesses need a robust infrastructure that can easily scale to meet demand, IXTech provides expert Internet Data Center management services that include administration, maintenance and equipment monitoring. Your enterprise benefits from working with a GLOBAL, SINGLE-SOURCE provider that understands your complete collocation and managed hosting needs.

### Benefits for Your Business

#### High-Speed Internet Connectivity

- World-class data centers with direct connections to global IP backbone and top tier carriers, providing reliable, one-stop shopping for robust connectivity and hosting options.

#### Avoidance of Large, Upfront Investment

- Equipment collocation at data centers helps you avoid the costs and maintenance that would otherwise be necessary to build and maintain your own infrastructure. Additionally, you can help control costs by outsourcing your hosting services to experienced professionals.

#### Redundancy for Mission-Critical Operations

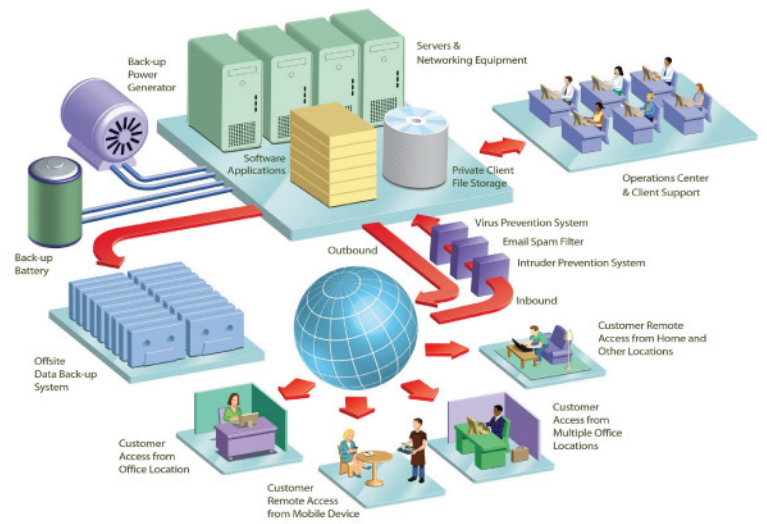

- State-of-the-art facilities equipped with back-up power systems help reduce single points-of-failure and maintain the reliability and availability of your mission-critical operations.

### Collocation

- Access to an integrated and seamless global IP network
- Scalable bandwidth available at various speeds
- Highly secure architecture and environment
- Redundant power and network connections into the data centers
- Flexibility to administer and access own equipment

Subsidiary of:

## Bandwidth

IXTech Internet Data Center unique offering can either include Top Tier transit through our highly-rated infrastructure network, or offer carrier neutral services for your custom applications. There is a wide range of bandwidth starting from 128Kbps and up to 10Gbps. With fixed bandwidth, the committed information rate of your connection is physically set at the speed you specify. This allows for lower pricing as well as reliable performance. In IXTech's effort to offer the most relevant and straight-forward solutions, we have given the client a better way to order bandwidth.

## Remote Access

IXTech Network Operation Center "NOC" technicians can provide basic remote maintenance services and troubleshooting capabilities to Collocation customers by acting as their "hands" and "eyes". We also offers Remote Reboot services, available 24x7x365. Here are some of the activities that can be performed with the help of Remote Reboot:

- Power cycle a router, server, switch or other piece of equipment
- Move or secure cable(s)
- Relay/report equipment status and alarm LEDs
- Enter console commands (with instructed by customer)

By interacting with IXTech NOC knowledgeable staff and "remotely accessing" their equipment, Collocation customers can perform tasks and receive immediate feedback without physically traveling to the site.

### **IXTech Limited**

A wholly-owned subsidiary of CNLink Networks Limited
