WHAT IS A STORAGE VPS ?

A Storage Virtual Private Server (VPS) is a dedicated virtual server that primarily focuses on providing enhanced storage capabilities. Unlike traditional VPS offerings, which balance compute and storage resources, Storage VPS emphasizes large disk capacities and high data transfer rates.

These servers are designed for use cases requiring substantial storage space and bandwidth but not necessarily high processing power. In a typical Storage VPS setup, SSD storage is utilized to ensure fast data read and write operations, delivering superior performance. Storage VPS is ideal for applications such as backup storage, file hosting, and data archiving.

STORAGE VPS ADVANTAGES

If you are contemplating a transition to a more robust storage solution but are uncertain about what is truly right for you, a Storage VPS might be the ideal fit for your needs. So why storage VPS?

Dedicated Storage Resources: Storage VPS provides dedicated storage resources, ensuring that your storage capacity and performance are not affected by other users.

Scalability: Easily scalable to meet your growing storage needs. You can increase or decrease storage capacity as required without significant downtime or complex migrations.

High Performance: Offers high-performance storage solutions with persistent SSD-based storage, ensuring fast data access and transfer speeds.

Cost-Effective: Provides a cost-effective solution compared to dedicated storage servers, offering similar benefits at a fraction of the cost.

Enhanced Security: Features robust security measures, including isolated virtual environments and advanced encryption, ensuring that your data is protected against unauthorized access.

Remote Accessibility: Access your storage from anywhere with an internet connection, offering convenience and flexibility for remote work and data management.

Technical Support: Typically includes 24/7 technical support, ensuring that any issues can be resolved quickly and efficiently.

All Plans come with London 1 IP address

VPS STORAGE PLANS

Every virtual server is with no oversubscription on CORE or RAM.

PLAN	CPU	Memory	SSD	Bandwidth	Price
Storage VPS 2x3	2	3	900 GB	Unlimited	\$25/mo
