

Meta's Kuna Data Center

The Kuna Data Center will be part of Meta's global infrastructure that brings our technologies and services to life.

\$800M+

Data center investment in Idaho

~100

Operational jobs supported once completed

1,000

Skilled trade workers on site at peak construction

We prioritize sustainability

Meta will be water positive in 2030, where we restore more water than we consume.

Meta's supported project is adding 200MW of new renewable energy in Idaho.

Our global operations, including our data centers and offices, are supported by 100% renewable energy and have reached net zero emissions.

Meta's global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Meta

Partnering with Idaho

We are committed to supporting the community through hiring people to build and operate our data center, volunteering and supporting local schools, nonprofits, and community projects.

Supporting the community

Meta has made a commitment to fund a \$70M+ new water and sewer system for Kuna. The infrastructure will be constructed by Meta contractors and dedicated to the city of Kuna to own and operate. When constructed, this system will be part of the infrastructure backbone to serve the recently annexed eastern side of the city.

We also support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, connect people online or off and improve STEM education. Our grants program will begin when the Kuna Data Center becomes operational.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Kuna Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- Be landscaped with native and drought resistant vegetation.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.
- Reuse treated wastewater for non-edible crop irrigation.

Water restoration

Our goal is to restore more water than we consume into local watersheds. We are investing in water conservation and restoration projects, including supporting Trout Unlimited and Boise State University to construct the Alta Harris Creek Side Channel that increases flows to Alta Harris Creek and supports fish passage through the Barber Dam, habitat reestablishment and improved water quality.

Supporting our data center with 100% renewable energy

Meta is working with Idaho Power to meet our 100% renewable energy goals for the Kuna Data Center. This includes the creation of a new green tariff under the Clean Energy Your Way program that is also available to other large customers looking to support their operations with renewable energy. This includes a new 200MW solar project in Idaho.

We are proud to support projects led by:

- Boise Metro Chamber of Commerce
- Boys and Girls Club of Ada County
- City of Kuna
- Idaho Association of Commerce & Industry
- Idaho Technology Council
- Kuna Chamber of Commerce
- Kuna Parks and Recreation
- Kuna School District
- Idaho STEM Ecosystem
