

Quest's Roseville High Availability Business Center (HABC)

Quest is expanding their cloud, business resumption, and data center services with the opening of a new High Availability Business Center (HABC) with over 120,000 square feet in Roseville, California, built to exacting structural and security standards.

Quest's Roseville HABC (one of over two dozen Global Service Delivery Centers) is strategically located at one of the most seismically stable and secure locations in California. It is uniquely situated in an area located well above the flood plain, clear of any mudslides or forest fires and far enough inland from extreme weather. Yet Roseville is close enough to drive to from any major metropolitan area in Northern California.

Everything is in place for maximum performance and security

The new data center is Tier 3 and SSAE 16 Type II compliant and will feature one of the most advanced fiber optic cable and redundant broadband and power infrastructures in California. The power supply is extremely reliable, however – in an emergency the Roseville HABC is backed up immediately by battery and onsite generators.

Quest's Roseville facility provides an alternative to the limitations of traditional IT architectures. The virtual machines, storage systems, networks, and office space available are always securely isolated and segmented.

Seismically Stable & Completely Secure

High Capacity Data Center

Lobby

Network Operations Center (NOC)

Fully Powered Redundant Backup

Your People & Data, Safe & Secure

Invest in the Capability, not the Product®

Customizable space to meet any needs

With over 120,000 square feet of open floor space — state-of-the-art data center, business resumption center, or high availability office space — customers can tailor space of any size to meet their specific needs. This allows companies to establish a permanent on-site presence to take full advantage of the proximity to the center’s redundant bandwidth and power capabilities.

From basic workstations, phones, and call center services, to fully-appointed command and control centers with adjacent data cells and robust network equipment, Quest can design and install virtually any configuration of desks, cabinets, power servers, and more to meet client needs while ensuring savings on capital expenditures.

The Roseville HABC area offers many strategic advantages

- The City of Roseville provides its own reliable and affordable electricity
- Low seismic activity
- Above the Sacramento flood plain
- Sacramento International Airport is less than 30 minutes away with runways exceeding the 5000' required length for all major aircraft
- Roseville is situated on Interstate 80 and near Interstate 5
- Roseville’s affordability index is one of the best in California
- The campus-like setting offers ample parking

Business Center Services

- 24 x 7 Network & Security Monitoring
- Cloud & Managed Services
- Data Vaulting & Replication
- Infrastructure as a Service (IaaS) with Hosted & Dedicated Servers
